1 Frame

In UART communication, the interaction between the host and the device is governed by a protocol. Data in the protocol is stored in little-endian mode. Additionally, to represent more data using fewer bytes, integers are used to represent floating-point numbers. Therefore, when packaging and unpacking, some data needs to be processed in conjunction with corresponding multipliers.

1.1 Frame Format

A data frame consists of a Frame Header, Payload Size, Payload, and Checksum. The payload contains UID, Frame ID and messages, and frames carrying different messages can achieve different functionalities.

Frame includes Uplink-Frame and Downlink-Frame.

The Uplink-Frame represents data sent by the device.

The Downlink-Frame represents data sent by the host to the tag.

The frame format and composition are as shown in Table 1 to Table 4.

Table 1. Uplink-Frame Format

| Frame Header | Payload Size | Payload | | Checksum |
|--------------|--------------|---------|----------|----------|
| | | / | \ | |
| | | UID | Frame ID | Messages |

Table 2. Downlink-Frame Format

| Frame Header | Payload Size | Payload | | Checksum |
|--------------|--------------|----------|----------|----------|
| | | / | \ | |
| | | Frame ID | Messages | |

Table 3. Frame Composition

| Data | | Type | Length (Bytes) | Description |
|--------------|----------|--------|----------------|--|
| Frame Header | | uint8 | 1 | Header of frame, value=0xAA. |
| Payload Size | | uint16 | 2 | Size of payload, max 1005. |
| Payload | UID | uint8 | 6 | Universally Unique Identifier. Use in Uplink-Frame. |
| | Frame ID | uint8 | 1 | Frame ID, See Table 4. |
| | Message | uint8 | Payload Size-7 | Frame payload data, composed of messages. |
| Checksum | | uint8 | 1 | The Checksum is equal to all previous bytes added. |

Table 4. Frame ID List

| Frame ID | Value | Description |
|---------------------|-------|---------------------------|
| Serial_Frame_Down | 2 | Common Downlink-Frame ID. |
| Serial_Frame_Tag_Up | 5 | Tag Data Uplink-Frame ID. |

1. 1. 1 Frame Example

The following examples will demonstrate the composition of a data frame.

Delay 10s to Reset:

Host send data: AA 05 00 02 02 02 0A 01 C0.

Table 5. Delay 10s to Reset Frame Example

| Data | | Hex | Result |
|--------------|----------|-------------|-------------------|
| Header | | AA | Header 0xAA |
| Payload Size | | 05 00 | 5 Bytes |
| Payload | Frame ID | 02 | Serial_Frame_Down |
| | Message | 02 02 0A 01 | MSG_RESET |
| Checksum | | C0 | 0xC0 |

Location Result:

Device send data: AA 2B 00 01 04 02 13 08 C0 05 44 20 56 5A 5C 03 00 00 00 00 2D C1 FB 3F
33 75 92 3F FD 78 99 3F FF FF FC FF 00 00 0B 0E 08 0C 0D 07 02 00 59.

Table 6. Location Result Frame Example

| Data | | Hex | Result |
|--------------|----------|-------------------|---------------------|
| Header | | AA | Header 0xAA |
| Payload Size | | 2B 00 | 43 Bytes |
| Payload | UID | 01 04 02 13 08 C0 | |
| | Frame ID | 05 | Serial_Frame_Tag_Up |
| | Message | 44 20...02 00 | MSG_LOCATION_RESULT |
| Checksum | | 59 | 0x59 |

1. 2 Message Format

A message consists of a Message ID, Need Confirm, Payload Size, and Payload.

Table 7. Message Format

| Message ID | Need Confirm | Payload Size | Payload |
|------------|--------------|--------------|---------|
|------------|--------------|--------------|---------|

Table 8. Message Composition

| Data | Type | Length | Description |
|--------------|-------|--------------|---------------------------|
| Message ID | uint8 | 1 Byte | Message ID. |
| Payload Size | uint8 | 7 Bits | Size of payload, max 127. |
| Reserved | | 1 Bit | Reserved. |
| Payload | uint8 | Payload Size | Message payload data. |

1.3 Communication Process

1.3.1 Active Output

Frames actively output by the device. e.g. MSG_LOCATION_RESULT

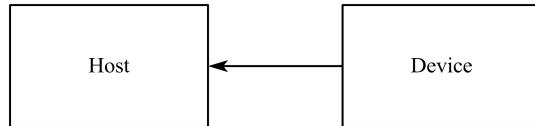

Figure 1. Active Output

1.3.2 Read Communication

The host sends a frame containing a READ_MSG, and the device responds with a frame containing a RESP_MSG.

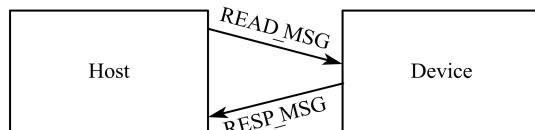

Figure 2. Read Communication

1.3.3 Write Communication

The host sends a frame containing a WRITE_MSG, and the device responds with a frame containing a RESP_MSG.

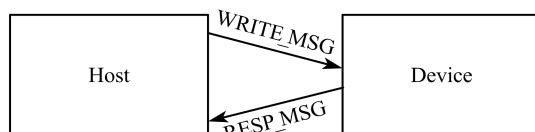

Figure 3. Write Communication

2 Message

Different messages serve different functions, distinguished by their message IDs.

2. 1 Message ID

Table 9. Message ID List

| Message Group | Message ID | Value | Type |
|---------------------|------------------------------|-------|------|
| MSG_RESET | MSG_Reset | 0x02 | WO |
| MSG_FIND | MSG_Find | 0x03 | WO |
| MSG_LOCATION_PARAM | MSG_Read_Location_Param | 0x3C | RO |
| | MSG_Write_Location_Param | 0x3D | WO |
| | MSG_Response_Location_Param | 0x3D | RO |
| MSG_INTERFACE_PARAM | MSG_Read_Interface_Param | 0x3E | RO |
| | MSG_Write_Interface_Param | 0x3F | WO |
| | MSG_Response_Interface_Param | 0x3F | RO |
| MSG_LOCATION_RESULT | MSG_Location_Result | 0x44 | RO |
| MSG_HEARTBEAT | MSG_Heartbeat | 0x4E | RO |
| MSG_ANCHOR_SIGNAL | MSG_Anchor_Signal | 0x60 | RO |
| MSG_ANCHOR_DDOA | MSG_Anchor_Ddoa | 0x61 | RO |
| MSG_RUN_TIME_PARAM | MSG_Read_Run_Time_Param | 0x64 | RO |
| | MSG_Write_Run_Time_Param | 0x65 | WO |
| | MSG_Response_Location_Param | 0x65 | RO |

2. 2 MSG_RESET

Restart current device, usually used to apply changes in parameters.

2. 2. 1 Composition

Table 10. MSG_RESET Composition

| Data | Type | Multiplier | Length (Bytes) | Description |
|------------------------|---------|------------|----------------|--|
| Delay | uint8 | 1 | 1 | Delay time to reset module, unit s. |
| Only_restart_when_need | uint8:1 | 1 | 1bits | Just restart when needed |

only_restart_when_need = true means that the hardware will check if there are any parameter changes that need to be restarted to take effect after receiving this command. If there are, it will restart. If not, this command will ignore it and will not restart

2. 2. 2 Example

Delay 10s to reset:

Host send message data: 02 02 0A 01.

Table 11. MSG_RESET Parsing Example

| Data | | Hex | Result |
|--------------|------------------------|-----|----------------------|
| Message ID | | 02 | Value=2 MSG_Reset |
| Payload Size | | 02 | 2 |
| Reserved | | 0 | Reserved |
| Payload | delay | 0A | 10s |
| | only_restart_when_need | 01 | Need restart |

2. 3 MSG_FIND

Used to search for devices

2. 3. 1 Composition

Table 12. MSG_FIND Composition

| Data | Type | Multiplier | Length (Bytes) | Description |
|----------|-------|------------|----------------|---|
| Duration | uint8 | 1 | 1 | The duration of continuous external prompts (such as vibration, flashing lights) received by the device |

2. 3. 2 Example

The duration of continuous external prompts (such as vibration, flashing lights) received by the device :

Host send message data: 03 01 0A.

Table 13. MSG_RESET Parsing Example

| Data | | Hex | Result |
|--------------|----------|-----|---------------------|
| Message ID | | 03 | Value=3 MSG_Find |
| Payload Size | | 01 | 1 |
| Reserved | | 0 | Reserved |
| Payload | duration | 0A | 10s |

2.4 MSG_LOCATION_PARAM

Used for user-defined location parameters.

2.4.1 Composition

Table 14. MSG_LOCATION_PARAM Composition

| Data | Type | Multiplier | Length (Bytes) | Description |
|---------------------------|---------|------------|-------------------|---|
| Reserved | float | 1 | 4 | Reserved |
| Expect_z | float | 1 | 4 | User sets the Z-axis value, unit: m. |
| z_noise | uint8 | 100 | 1 | User sets the Z-axis noise, unit: m. |
| Smooth_window | uint8:4 | 1 | 4bits | Smooth window,0~5 |
| Max_acceleration[3] | uint8 | 50 | 3 | 3 axis max acceleration{x,y,z},unit:m/s ² . |
| Output.tag_pos | uint8 | 1 | 1bits | Output label positioning result |
| Output.anchor_packet | | | 1bits | Forwarding beacon packets sent to the backend |
| Output.anchor_pos | | | 1bits | Output the beacon coordinate information received by the tag |
| Output.anchor_link_data | | | 1bits | Output link information between beacons |
| Output.anchor_signal | | | 1bits | Output beacon positioning signal data received by the tag |
| Output.anchor_ddoa | | | 1bits | Output distance difference information between tags and beacons |
| Output.tag_pos_even_error | | | 1bits | Output even if the positioning result is invalid |
| Output.anchor_link_status | | | 1bits | Output the synchronization status of inter beacon links |
| Sniff_duty_cycle | uint8 | 1 | 1 | Sniffing periodic |

2.4.2 Example

Read location parameters

Host send message data: 3C 00.

Table 15. MSG_LOCATION_PARAM Read Parsing Example

| Data | Hex | Result |
|--------------|-----|-------------------------------------|
| Message ID | 3C | Value=60 MSG_Read_Location_Param |
| Payload Size | 00 | 0 |
| Reserved | 0 | Reserved |

Device response message data: 3D 0F 00 00 80 3F 9A 99 99 3F 0A 02 0A 0A 01 31 14.

Table 16. MSG_LOCATION_PARAM Response Parsing Example

| Data | | Hex | Result |
|--------------|---------------------|-------------|--|
| Message ID | | 3D | Value=61 MSG_Response_Location_Param |
| Payload Size | | 0F | 15 Bytes |
| Reserved | | 0 | Reserved |
| Payload | reserved | 00 00 80 3F | reserved |
| | expect_z | 9A 99 99 3F | 1.2m |
| | z_noise | 0A | 0.1m |
| | smooth_window | 02 | 2 |
| | max_acceleration[3] | x | 0.2m/s ² |
| | | y | 0.2m/s ² |
| | | z | 0.02m/s ² |
| | output | | Output.tag_pos:1 Output.anchor_signal:1 Output.anchor_ddoa:1 |
| | sniff_duty_cycle | 14 | 20 |

2.5 MSG_INTERFACE_PARAM

2.5.1 Composition

Table 17. MSG_INTERFACE_PARAM Composition

| Data | Type | Multiplier | Length (Bytes) | Description |
|------|---------|------------|----------------|-----------------------|
| UART | uint8:1 | 1 | 1bit | UART interface switch |
| IIC | uint8:1 | 1 | 1bit | IIC interface switch |
| UWB | uint8:1 | 1 | 1bit | UWB interface switch |

2.5.2 Example

Read interface parameters

Host send message data: 3E 00.

Table 18. MSG_INTERFACE_PARAM Read Parsing Example

| Data | Hex | Result |
|--------------|-----|--------------------------------------|
| Message ID | 3E | Value=62 MSG_Read_Interface_Param |
| Payload Size | 00 | 00 |
| Reserved | 0 | Reserved |

Device response message data: 3F 01 05.

Table 19. MSG_INTERFACE_PARAM Response Parsing Example

| Data | Hex | Result |
|--------------|-----|--|
| Message ID | 3F | Value=63 MSG_Response_Interface_Param |
| Payload Size | 01 | 1 Byte |
| Reserved | 0 | Reserved |
| Payload | 05 | 1 |
| | | 0 |
| | | 1 |

2. 6 MSG_LOCATION_RESULT

2. 6. 1 Composition

Table 20. MSG_LOCATION_RESULT Composition

| Data | Type | Multiplier | Length(Bytes) | Description |
|---------------|--------|------------|---------------|--|
| Location_time | uint64 | 1 | 8 | Time on module location time. |
| Pos [3] | float | 1 | 12 | 3 axis position{x,y,z},unit:m. |
| Vel [3] | int16 | 100 | 6 | 3 axis velocity{x,y,z},unit:m/s. |
| Pos_noise [3] | uint8 | 100 | 3 | 3 axis position noise{x,y,z},unit:m. |
| Vel_noise [3] | uint8 | 100 | 3 | 3 axis velocity noise{x,y,z},unit:m/s. |
| Map_id | uint8 | 1 | 1 | The ID of the current map |
| Error_code | uint8 | 1 | 4bits | TBD |
| Area_id | | | 4bits | The ID of the area |

2. 6. 2 Example

Device active output location result:

Device send message data: 44 22 B5 23 0B 02 00 00 00 00 DD 51 b1 41 EB 58 57 41 AA E7 9A 3F FA FF 04 00 00 00 07 07 04 08 08 04 02 00.

Table 21. MSG_LOCATION_PARAM Response Parsing Example

| Data | | Hex | Result |
|--------------|---------------|-------------------------|---|
| Message ID | | 44 | Value=68 MSG_Response_Location_Param |
| Payload Size | | 22 | 34 Bytes |
| Reserved | | 0 | Reserved |
| Payload | location_time | B5 23 0b 02 00 00 00 00 | 34284469 ms |
| | pos[3] | x DD 51 b1 41 | 22.164972 m |
| | | y EB 58 57 41 | 13.459208 m |
| | | z AA E7 9A 3F | 1.210195 m |
| | vel[3] | x FA FF | -0.06 m/s |
| | | y 04 00 | 0.04 m/s |
| | | z 00 00 | 0 m/s |
| | pos_noise [3] | x 07 | 0.07 m |
| | | y 07 | 0.07 m |
| | | z 04 | 0.04 m |
| | vel_noise [3] | x 08 | 0.08 m/s |
| | | y 08 | 0.08 m/s |
| | | z 04 | 0.04 m/s |
| | map_id | 02 | 2 |
| | error_code | 00 | 0 |
| | area_id | | 0 |

2. 7 MSG_HEARTBEAT

2. 7. 1 Composition

Table 22. MSG_HEARTBEAT Composition

| Data | Type | Multiplier | Length(Bytes) | Description |
|-----------------------|-------|------------|---------------|---|
| Battery_percent | uint8 | 1 | 7bits | Battery percent , % |
| Is_charge | | 1 | 1bits | Is it charging |
| Need_restart | uint8 | 1 | 1bits | Need to restart |
| Reset_info_dirty | | 1 | 1bits | It is new restart information |
| Assert_info_dirty | | 1 | 1bits | It is new assert information |
| Restart_cnt | | 1 | 3bits | Restart cnt |
| Hardware_enabled_uart | | 1 | 1bits | Hardware io selection enable interface |
| Hardware_enabled_iic | uint8 | 1 | 1bits | |
| Hardware_enabled_uwb | | 1 | 1bits | |
| Firmware_series | uint8 | 1 | 1 | Firmware Series |
| Firmware_version | uint8 | 1 | 4 | Firmware Version |
| UID | uint8 | 1 | 6 | UID |

2. 7. 2 Example

Device active output heartbeat result:

Device send message data: 4E 0E 00 00 00 22 02 00 01 00 01 04 02 13 08 c0

Table 23. MSG_HEARTBEAT Response Parsing Example

| Data | Hex | Result |
|-----------------------|-------------------|---------------------------|
| Message ID | 4E | Value=78 MSG_HeartBeat |
| Payload Size | 0E | 14 Bytes |
| Reserved | 0 | Reserved |
| Battery_percent | 00 | 0% |
| Is_charge | | No |
| Need_restart | 00 | No |
| Reset_info_dirty | | No |
| Assert_info_dirty | | No |
| Restart_cnt | | 0 |
| Hardware_enabled_uart | 00 | 0 |
| Hardware_enabled_iic | | 0 |
| Hardware_enabled_uwb | | 0 |
| Firmware_series | 22 | |
| Firmware_version | 02 00 01 00 | V2.0.1.0 |
| UID | 01 04 02 13 08 C0 | UID |

2.8 MSG_ANCHOR_SIGNAL

Please note that if you need to read data from this register address, you need to enable debug mode on the ubeacon tool and turn on the corresponding data switch in the parameter configuration

2.8.1 Composition

Table 24.MSG_ANCHOR_SIGNAL Composition

| Data | Type | Multipl ier | Length(Byt es) | Description |
|---------------|----------------------|----------------|-------------------|--|
| Location_time | uint64 | 1 | 8 | Time on module location time. |
| Count | uint8 | 1 | 4bits | Received beacons num |
| Area_id | | | 4bits | Area id |
| Reserved | uint8 | 1 | 1 | Reserved |
| Datas[9] | addr | uint16 | 1 | Ubeacon addr |
| | reserved | int16 | 10 | Reserved |
| | reserved | int8 | 1 | Reserved |
| | reserved | uint8 | 100 | Reserved |
| | rx_rssi | uint8 | -2 | Received signal strength |
| | fp_rssi | uint8 | -2 | First path signal strength |
| | uwb_clock_offset_ppm | int16 | 100 | UWB frequency offset |
| | mcu_clock_offset_ppm | int16 | 100 | RTC frequency offset |
| | rx_rate | uint8 | 255 | Recent packet reception rate of this beacon signal |

2. 9 MSG_ANCHOR_DDOA

Please note that if you need to read data from this register address, you need to enable debug mode on the ubeacon tool and turn on the corresponding data switch in the parameter configuration

2. 9. 1 Composition

Table 25.MSG_ANCHOR_DDOA Composition

| Data | Type | Multiplier | Length(Bytes) | Description |
|---------------|--------|------------|---------------|--|
| Location_time | uint64 | 1 | 8 | Time on module location time. |
| Addr0 | uint16 | 1 | 2 | Device communication address |
| Addr1 | uint16 | 1 | 2 | Device communication address |
| Ddoa | int16 | 100 | 2 | Distance between beacons |
| Ddoa_std | uint16 | 100 | 2 | Standard deviation of distance between beacons |

2. 9. 2 Example

Device active output anchor ddoa:

Device send message data: 61 10 B5 23 0B 02 00 00 00 00 69 11 89 2B 00 00 23 00

Table 26. MSG_ANCHOR_DDOA Response Parsing Example

| Data | Hex | Result |
|---------------|-------------------------|-----------------------------|
| Message ID | 61 | Value=97 MSG_Anchor_Ddoa |
| Payload Size | 10 | 16 Bytes |
| Reserved | 0 | Reserved |
| Location_time | B5 23 0B 02 00 00 00 00 | 34284469ms |
| Addr0 | 69 11 | |
| Addr1 | 89 2B | |
| Ddoa | 00 00 | 0 |
| Ddoa_std | 23 00 | 0.35 |

2. 10 MSG_RUN_TIME_PARAM

2. 10. 1 Composition

Table 27. MSG_RUN_TIME_PARAM Composition

| Data | Type | Multiplier | Length (Bytes) | Description |
|------------------|-------|------------|----------------|-------------------|
| Sniff_duty_cycle | uint8 | 1 | 1 | Sniffing periodic |

2. 10. 2 Example

Read run time parameters

Host send message data: 64 00.

Table 28. MSG_RUN_TIME_PARAM Read Parsing Example

| Data | Hex | Result |
|--------------|-----|--------------------------------------|
| Message ID | 64 | Value=100 MSG_Read_Run_Time_Param |
| Payload Size | 00 | 00 |
| Reserved | 0 | Reserved |

Device response message data: 65 01 14.

Table 29. MSG_RUN_TIME_PARAM Response Parsing Example

| Data | Hex | Result |
|------------------|-----|--|
| Message ID | 65 | Value=101 MSG_Response_Run_Time_Param |
| Payload Size | 01 | 1 Byte |
| Reserved | 0 | Reserved |
| Sniff_Duty_Cycle | 14 | 20 |
